Experience

Canva Perth, AU

Software Engineer Mar 2026 – Present

- Owned Canva's LLM-based video caption translation pipeline end to end, rebuilding it to support over 100 languages with accurate timing on long videos; ∼80% faster on short clips, and videos over two minutes went from always failing to translating in under 30s.
- Scoped, delivered, and managed stakeholder communications for a backend API (Java, SQS, DynamoDB) that creates fully translated copies of any Canva design type, built to integrate with Canva AI and handle bulk translation across many designs and languages concurrently.
- Led the backend migration of Magic Translate from machine translation to LLM translation with textual and visual context, authoring design docs and building the integration.
- Launched three new locales end to end, working with localisation leads on requirements while refactoring feature-flag logic to scale to more locales, fixing Smartling sync timeouts, and handling fallback logic.
- Primary on-call for translation services, root-causing production incidents, resolving customer translation failures from logs, and handling support requests from other teams via the team's internal help channel.
- Prototyped and presented a feature in two days at the company hackathon letting anyone view a shared Canva design translated into their own language, with LLM-driven font reflow to keep the layout intact.

Associate Software Engineer Feb 2025 – Feb 2026

- Owned a new feature across Magic Translate and Smartling end to end from design and build through testing, analytics, and 100% rollout; 540M+ characters translated for 38K+ users, with ∼1,500 weekly users and nearly 50% repeat users.
- Designed, built, and deployed translation admin pages and a new frontend gateway service (React/TypeScript + Java), giving non-engineers self-serve visibility into LLM translation configs; adopted by 4+ teams.

Software Engineer Intern Dec 2023 – Feb 2024

- Implemented accessibility checker rules in TypeScript, React, and MobX that detect and auto-fix WCAG issues across various design types; documented the work and presented it company-wide.

Visagio Perth, AU

Technology Consultant Intern May 2022 – Mar 2023

- Led a Python project that replaced a manual calculation workflow with a tool to tweak parameters, run calculations, and visualise results, improving efficiency by 30%.
- Built Angular/TypeScript features and C#/.NET APIs, deployed via Azure CI/CD, for a client web tool that cut manual work by 15%.

University of Western Australia Perth, AU

Tutor and Research Assistant Mar 2022 – Sep 2023

- Trained a Python/Keras deep learning model to diagnose ear diseases from otoscopic images, published at EUVIP 2023.
- Tutored students in CITS1001 Software Engineering with Java, including marking assessments and invigilating exams.

Soar.Earth Perth, AU

Software Engineer Intern Aug 2020 – Jul 2022

- Developed frontend features for a satellite imagery platform in React, Redux, and TypeScript as it grew from 5,000 to 50,000 registered users, while writing automated tests with React Testing Library and Cypress.

Technical Skills

Languages: Java, TypeScript/JavaScript, Python, SQL, C++
Backend & Infra: RPC microservices, Protobuf, AWS (SQS, DynamoDB), Bazel, Docker, Buildkite
Frontend: React, MobX, Redux, Angular, Vue, Jest
AI: LLM integration (structured outputs), Claude Code skills and multi-agent workflows

Education

University of Western Australia Feb 2019 – Dec 2024

Master of Professional Engineering with Distinction (Software Specialisation) Perth, AU

First Class Honours in Computer Science and Software Engineering

WAM: 82.36%, GPA: 6.73/7
